OPPORTUNITIES TO UPGRADE YOUR ACCESS CONTROL TECHNOLOGY

When is a good time to start a transition to new access control technology? There are many possible entry points from which to begin:

01

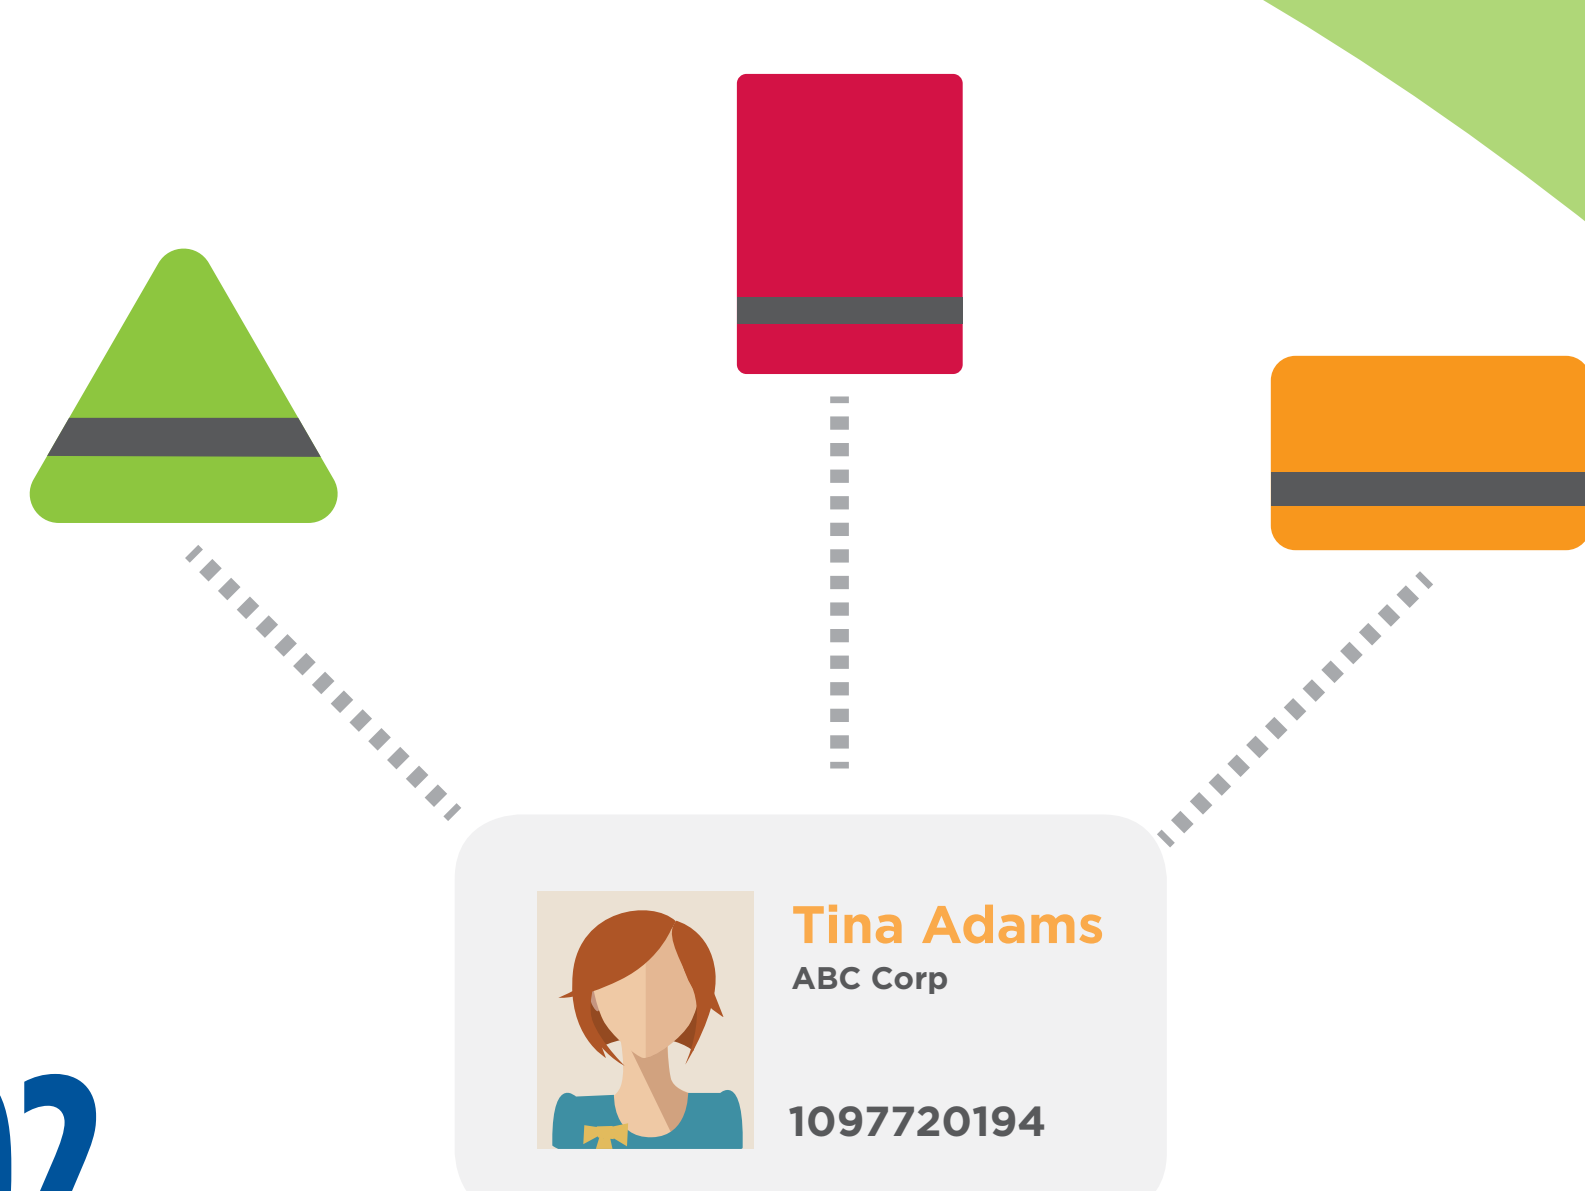

Investment in new technology is often comparable to the cost of integrating two separate legacy systems.

MERGER OR ACQUISITION

COMMON SYSTEM STANDARD

02

Standardizing and centralizing management of secure identity ensures consistency, higher security and a more efficient use of resources.

FACILITY CONSOLIDATION, ADDITION OR RELOCATION

03

Mass rebadging is much simpler to coordinate and manage on a single, centralized standard.

04

Change of cards due to a new brand image or logo or as new employees join create an opportunity for upgrade to newer technology.

RE-ISSUANCE PROCESS

05

Upgrade to a contactless smart card that combines access control with other functions, enabling employees to carry a single card for many purposes.

INNOVATIVE NEW CARD APPLICATIONS

06

Insurance requirements or reducing liabilities of an outdated system to the current standard can dramatically improve security.

RISK MANAGEMENT IMPROVEMENT

07

New legislation, regulatory requirements, new client or building tenants requiring an increase in security.

CHANGES TO SECURITY REQUIREMENTS

08

Transitioning to PIV, PIV-I and CIV cards enable implementation of the highest levels of security including strong authentication at the door.

STRONG AUTHENTICATION ADOPTION

09

Ideally, organizations should upgrade before there is a problem, especially when the current system uses legacy technology that is easily breached.
