Environmental Product Declaration HID Signo[™] 40/40K Reader

Non-Keypad Models: 40NxS and 40TxS Keypad Models: 40KNxS and 40KTxS

HID is committed to providing products and services that are environmentally sound throughout the entire production process and the product lifecycle. Our unconditional aim is to make sustainability a central part of our business philosophy and culture, but even more important is the job of integrating sustainability into our business strategy. **Environmental Product** Declarations (EPDs) help architects, designers and LEED-APs select environmentally preferable door openings.

HID will continue our efforts to protect the environment and health of our customers and end users, and we utilize the EPD as a means to document our commitment to environmental sustainability.

Wall switch RFID Reader with 13.56 MHz (HF), 125 kHz (LF), and 2.4 GHz (Bluetooth) support. Models covered by this EPD include: Keypad version - Terminal Strip / Pigtail Non-Keypad - Terminal Strip / Pigtail

This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:	Sponed Sprin			
	Thomas P. Gloria, Industrial Ecology Consultants			

LIMITATIONS

Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

Accuracy of Results: EPDs regularly rely on estimations of impacts; the level of accuracy in estimation of effect differs for any particular product line and reported impact.

<u>Comparability</u>: EPDs from different programs may not be comparable. Full conformance with a PCR allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible". Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

HID Signo™ 40/40K Reader Door Hardware

Ø

According to ISO 14025, EN 15804, and ISO 21930:2017

General Information

Description of Company/Organization

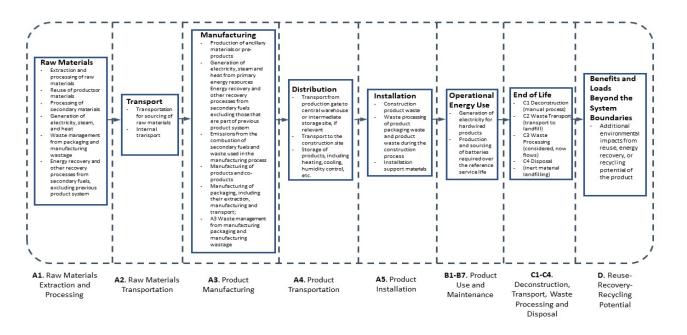

HID Signo[™] readers are manufactured by certified manufacturers. The manufacturer is located in Mexico and has an ISO 14001 certified environmental management system in place.

HID remains committed to the principles of the UN Global Compact in the areas of human rights, labor, the environment and anti-corruption.

Product Description

Product name: HID Signo[™] 40/40K Reader Product characteristics: Wall switch RFID Reader with 13.56 MHz (HF), 125 kHz (LF), and 2.4 GHz (Bluetooth) support. Models covered by this EPD include: Keypad version - Terminal Strip / Pigtail Non-Keypad - Terminal Strip / Pigtail

HID Signo[™] 40/40K Reader

Door Hardware

Manufacturer Specific EPD

This product-specific EPD was developed based on the cradle-to-grave (modules A1-D) Life Cycle Assessment. The EPD accounts for raw material extraction and processing, transport, product manufacturing, distribution, installation, use, maintenance, disposal, and potential benefits and loads following the end of life disposal. Manufacturing data were gathered directly from company personnel. When updated company-specific data were not available the ratio of production units, between the 2018 calendar year and 2015 baseline year, was used as a proxy. For any product group EPDs, an impact assessment was completed for each product and the highest impacts were reported as conservative representations of the product group. Product grouping was considered appropriate if the individual product impacts differed by no more than ±10% in any impact category.

Application

HID Signo[™] 40/40K Readers provide the widest range of credential technologies, including support for HID Mobile Access, Seos, iCLASS, iCLASS SE, MIFARE DESFire and legacy HID Proximity, Indala Proximity, and EM Proximity. Common applications include, but are not limited to, buildings in the commercial, industrial, financial, educational, government, and healthcare industries.

Material Composition

Material	Percentage in mass (%)
Brass	0.51%
Stainless Steel	6.62%
Steel	0.00%
Aluminum	0.00%
Electronics/Mechanics	24.42%
Plastics	51.90%
Other	16.55%
Total	100.00%

Technical Data

For the declared product, the following technical data in the delivery status must be provided with reference to the test standard:

Technical Data				
Depth	21.5 mm			
Width	80 mm			
Height	121.5 mm			

According to ISO 14025, EN 15804, and ISO 21930:2017

HID Signo™ 40/40K Reader

Door Hardware

Placing on the Market / Application Rules

The standards that can be applied for HID Signo $^{\text{TM}}$ 40/40K Reader are:

- UL 294 The Standard of Saftey for Access Control System Units
- C22.2 No. 205 Signal Equipment
- CB Certificate US-21166-UL
- US FCC Radio Certification 47 CFR Part 15, Subpart C
- Canada Radio Certification RSS-210 Issue 8: 2010
- EN 60950-1: 2006/ All: 2009 +A1:2010 +A12:2011 Information technology equipment Safety Part1: General requirements

HID

- EN 301 489-1 V1.9.2 - Common Technical Requirements

- EN 301 489-3 V1.6.1 - Specific conditions for ShortRange Devices (SRD) operating on frequencies between 9 kHz and 40 GHz

- EN 50130-4:2011 Alarm systems Electromagnetic Compatibility and Environmental test methods
- ETSI EN 300 330-2 V1.5.1 Electromagnetic Compatibility and Radio spectrum Matters (ERM)
- EN 50581:2012 RoHS2 Conformity

Additional and applicable regional certifications may be found at: https://www.hidglobal.com/compliance-certifications

Properties of Declared Product as Shipped

Products are delivered as a complete unit, inclusive of all installation materials and instructions. Delivered in a box size: 180mm (7.08") x 120mm (4.72") x 45mm (1.77") 2.8mm (0.11") thick card (F Flute)

Delivery Status

Shipments of HID products are delivered in a cardboard box.

HID Signo[™] 40/40K Reader

Door Hardware

Methological Framework

Functional Unit

The declaration refers to the functional unit of 1 unit (or piece) of Non-Keypad Models: 40NxS and 40TxS Keypad Models: 40KNxS and 40KTxS, as specified in the Builders Hardware PCR.

Name	Value	Unit
Declared unit	1	One (1) Reader
Mass	0.1965	kg
Conversion factor to 1 kg	5.088	-

HID

System Boundary

This is a cradle to grave Environmental Product Declaration. The following life cycle phases were considered:

Pro	Product Stage		Construction Process Stage		Use Stage			Er	nd of Li	fe Sta	ge*	Benefits and Loads Beyond the System Boundaries				
Raw material supply	Transport	Manufacturing	Transport from gate to the site	Construction/ installation process	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction /demolition	Transport	Waste processing	Disposal	Reuse-Recovery- Recycling potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х

Description of the System Boundary Stages Corresponding to the PCR

(X = Included; MND = Module Not Declared)

*This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

Product Maintenance

This product requires no maintenance over its reference service life.

Reference Service Life

The reference service life is 25 years.

Allocation

Allocation was determined on a per unit basis.

HID Signo™ 40/40K Reader

According to ISO 14025, EN 15804, and ISO 21930:2017

Door Hardware

Cut-off Criteria

Processes whose total contribution to the final result, with respect to their mass and in relation to all considered impact categories, is less than 1% can be neglected. The sum of the neglected processes may not exceed 5% by mass of the considered impact categories. For that a documented assumption is admissible.

For Hazardous Substances the following requirements apply:

- The Life Cycle Inventory (LCI) of hazardous substances will be included, if the inventory is available.
- If the LCI for a hazardous substance is not available, the substance will appear as an input in the LCI of the product, if its mass represents more than 0.1% of the product composition.
 - If the LCI of a hazardous substance is approximated by modeling another substance, documentation will be provided.

This EPD is in compliance with the cut-off criteria. No processes were neglected or excluded. Capital items for the production processes (machine, buildings, etc.) were not taken into consideration.

Data Sources

Primary data were collected for every process in the product system under the control of HID Global. Secondary data from the GaBi Sphera database were utilized. These data were evaluated and have temporal, geographic, and technical coverage appropriate to the scope of the Builder's Hardware product category.

Data Quality

The data sources used are complete and representative of North America in terms of the geographic and technological coverage and are a recent vintage (i.e. less than ten years old). The data used for primary data are based on direct information sources of the manufacturer. Secondary data sets were used for raw materials extraction and processing, end of life, transportation, and energy production flows. Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty.

Period Under Review

The period under review is the full calendar year of 2018.

Comparability and Benchmarking

A comparison or an evaluation of EPD data is only possible if all data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account. Environmental delarations from different programs may not be comparable. Full conformance with the PCR for North American Builders Hardware products allows EPD comparability only when all stages of a Builders Hardware product's life cycle have been considered. However, variations and deviations are possible.

Estimates and Assumptions

End of Life

In the End of Life phase, metal materials were assumed to have an 85% recycling rate while all other materials were assumed to have a 0% recycling rate, in accordance with the Builder's Hardware PCR.

HID Signo[™] 40/40K Reader

Door Hardware

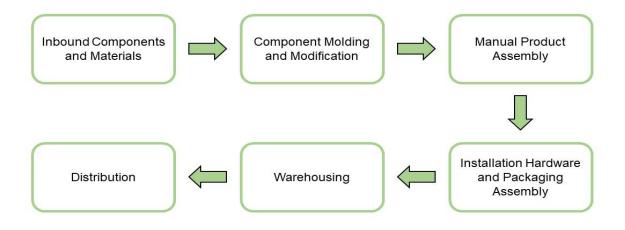

Additional Environmental Information

Background data

For life cycle modeling of the considered products, the GaBi 8 Software System for Life Cycle Engineering, developed by Sphera, is used. The GaBi-database contains consistent and documented datasets which are documented in the online GaBi-documentation. To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials.

Manufacturing

The primary manufacturing processes are made by Tier 1 suppliers and the final manufacturing processes occur in Mexico.

Packaging

Shipments of HID products are delivered in a cardboard box.

HID Signo[™] 40/40K Reader

According to ISO 14025, EN 15804, and ISO 21930:2017

Door Hardware

LCA Interpretation

The production life cycle stage (A1-A3) and in life energy usage (B6) dominate the impacts across all impact categories. This is due to the upstream production of materials used in the product, along with electricity use in the manufacturing of the product and the consumption of electricity during the card reader's usage. With two replacements required over a life-span of a building, the replacement stage (B4) dominates from duplicating these stages.

HID Signo[™] 40/40K Reader

According to ISO 14025, EN 15804, and ISO 21930:2017

Door Hardware

Additional Environmental Information

Environmental and Health During Manufacturing

HID Global is committed to producing and distributing door opening solutions with minimal environmental impact, where health & safety is the primary focus for all employees and associates.

• Environmental operations, GHG, energy, water, waste, VOC, surface treatment and H&S are being routinely monitored. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environment management program effectiveness is evaluated.

• Code of Conduct covers human rights, labor practices and decent work. Management of ASSA ABLOY is aware of their environmental roles and responsibilities, providing appropriate training, supporting accountability and recognizing outstanding performance.

• Any waste metals during machining are separated and recycled. The waste from the water-based painting process is delivered to waste treatment plant.

• The factory in Mexico has certification of Environmental Management to ISO 14001:2004 and Occupational Health and Safety to OHSAS 18001:2007.

Environmental and Health During Installation

There is no harmful emissive potential. No damage to health or impairment is expected under normal use corresponding to the intended use of the product.

Extraordinary Effects

Fire

The external housing of the HID Signo[™] 40/40K Reader, consisting of the bezel and mounting plate, are constructed from polycarbonate resin thermoplastic. The housing material, and thus the reader as a whole unit, has been classified as having a UL94 HB Flame Rating. A UL94 Flame Rating of HB indicates: slow burning on a horizontal specimen; burning rate < 76 mm/min for thickness < 3 mm and burning stops before 100 mm.

Water

HID Signo[™] 40/40K Readers are IP65 rated. Product contains no substances that have any impact on water in case of flood.

Mechanical Destruction

No danger to the environment can be anticipated during mechanical destruction.

Delayed Emissions

Global warming potential is calculated using the TRACI 2.1 and CML 4.1 impact assessment methodologies. Delayed emissions are not considered.

Environmanetal Activities and Cerifications

ASSA ABLOY minimizes the environmental impacts of its business activities through various corporate-wide sustainability initiatives. To learn more, please visit: https://www.assaabloy.com/sustainability/sustainability/report/

Many ASSA ABLOY Group Brands now offer a free Product End-of-Life Recycling program that accepts each brand's products that have reached the end of their life cycle and are beyond the product's warranty period, disposing them in an environmentally-responsible manner.
